

WEB ADVERTISEMENT FACTS

A web banner or banner ad is a form of electronic advertising on the World Wide Web, being a powerful online marketing tool. It entails embedding an advertisement into a web page intended to attract traffic to a website by linking to the website of the advertiser. The advertisement is constructed from an image (usually in high-aspect ratio shape), program or multimedia object employing technologies, often with sound, animation or video to maximize presence.

It is similar to an ad in a print medium, like newspaper, magazine or journal. However, one major difference is that a banner can be interactive and hyperlinked to the advertiser's website. When a user clicks on the advertisement, one is led to another web page detailing his products and services, promoting an organization or business, a site launch or special events, show or an exhibition, which is advertised on the banner.

Now, to acclimatize in the constant change of electronics world, SEIPI offers online advertising services for semiconductor and electronics member-companies as well as its supplier and vendors (nonmembers). Advertise with us to connect yourself with the right companies for your business making it easier to find a receptive market. Our goal is to actively promote your services and your company, so you can attract not just the prospective but the right clients to your company.

Advantages:

- Increase brand awareness for a nominal cost
- Certainly more effective because of its ability to elicit immediate action from a potential customer
- Scalability and Visibility
- Targeted Message/Marketing
- Availability of new online ad technology, which keep pace with the fast changing world
- No limitations/ barrier; it can be viewed day and night throughout the globe
